

PARK ROAD
DENTAL CARE

Jane Foster received her facial aesthetic training at The Royal College of General Practitioners in London. She offers a free, no obligation consultation for the treatment of lines and wrinkles.

1) Anti-wrinkle injections- Botulinum Type A (Botox)- This is used to prevent lines forming and to soften existing lines in the upper face. We offer consultation for the treatment of Crow's Feet, frown lines and forehead lines.

Botulinum has been used as a cosmetic treatment in the UK for over 10 years. It is considered very safe, comfortable and consistent in its results.

2) Dermal Fillers- Fillers are used to smooth away wrinkles and to restore lip volume. They can reduce the nasolabial fold lines and marionette lines and lift the corners of the mouth. Natural looking, fuller lips with well defined borders can be created. We use Juvederm (www.juvederm.co.uk) as it has an established safety profile and has been used in over 16 million treatments. It gives natural results which last up to a year. Juvederm is a combination of local anaesthesia and hyaluronic acid, a natural lubricant which is found throughout our bodies.

If you are looking for great results from treatments administered in a safe environment by a professional aesthetic dental surgeon, please get in touch.
